

How To Get Rid Of Dark Circles Fast : Make Up Tutorial

For all you moms out there, I have a new (and simple) make-up technique that's going to get rid of those **pesky dark circles under our eyes** that will make you look incredible!

Between making meals, school drop off and pick up, dance classes, and swimming lessons -sleep isn't something we get to do very often, or for very long.

In just 3 simple steps we're going to go from **zomb-mom** to **super-mom** and while we may not be wide awake, we sure will look it! ?

Watch the video below for the complete tutorial or scroll down for this quick and easy make-up look...

This is technique is a quick three step process that will leave you looking awake, refreshed, and youthful.

Step 1

- Choose a colour corrector that is a shade opposite of the colour of your dark circles. i.e. peach cancels out dark blue/black circles.
- Using your finger, take a small amount of the colour corrector and dab it wherever the discolouration occurs.

Step 2

- Take a thick, creamy concealer, and squeeze a small amount onto the back of your hand. My fave is this [Skin Perfecting Concealer by Younique](#). Using a colour that is two shades lighter than your skin tone will help you look even more awake.
- With a [concealer brush](#), apply a layer of concealer under your eye in an upside down triangle and fill it in.
- Next, take a damp blending bud, and blend the concealer in so there are no harsh lines.

Step 3

- The last step is to take a [translucent setting powder](#) with a triangle sponge and pack it on the under eye area.
- Let it sit for about 5 minutes and brush off with a [puff brush](#).
